

The installation priorities for depots are based on the criteria below.

- Sites that are currently involved in supporting fire operations are highest priority (1)
- Sites co-located with level 3 ICC's
- Sites collocated with level 2 ICC's or division command points
- Depots that are separate from the office locations

The following Gippsland depots sites had wifi installed as part of the initial Proof of Concept (refer landing page). These sites will have the new device configuration pushed out remotely (at a time that will be agreed and will minimise operational impacts): Orbost, Nowa Nowa, Bairnsdale, Dargo, Brigalong, Yarram.
